

Week 6: Internship Portfolio & Final Submission

Internship Summary

Over the past 6 weeks, I have successfully executed two practical cybersecurity projects, enhancing my skills in Python programming, network security, and vulnerability research.

Project Portfolio

1. **Network Port Scanner:** Developed a Python-based scanner with automated Banner Grabbing capabilities.
2. **Password Strength Analyzer:** Built an entropy-based analyzer using Regular Expressions to enforce password policies.

Key Takeaways

- Gained hands-on experience in ethical security testing.
- Learned to structure technical projects professionally on GitHub.
- Improved documentation skills through structured weekly reports.

Final Submission

All code, documentation, and weekly reports are consolidated in this repository. Prepared for final evaluation and ready to showcase to the community.
