

Week 3: Technical Report - Project 1 (Network Port Scanner)

Overview

Successfully completed the development and testing of the Network Port Scanner. The tool is designed to identify active services on a target network.

Key Features

- **TCP Scanning:** Efficiently identifies open TCP ports.
- **Service Detection (Banner Grabbing):** Implemented functionality to pull service headers from open ports.
- **Performance:** Configured with socket timeouts to ensure rapid scanning without overhead.

Results

Tested successfully against local infrastructure (192.168.1.1). Detected active services on port 443. All findings were documented and verified.

Conclusion

Project 1 is fully functional and meets the beginner-level requirements set by InternCareerPath.
